

Hard Drive Destruction

HDD specialise in on- site hard drive destruction. They are equipped to destroy your data on site, while you watch.

The on- site hard drive destruction service comprises of 4 easy steps:

1. HDD technician arrives at your premises at a time convenient to you and commences scanning each hard drives unique serial number and hard drive manufacturer details.
2. The CESG Certified Destruction machine is set up at your site and the hard drives are systematically destroyed. No hard drives leave your premises until they have been destroyed; you are welcome to witness the process.
3. The waste hard drives are removed from your site, and taken for recycling.
4. HDD issue a destruction certificate confirming the destruction of the hard drives which meets your data protection obligations regarding the destruction of data.

The benefits of using HDD's service:

- Fast and cost efficient
- Confirmation of the serial numbers of destroyed drives
- Hard drive crushing undertaken in a safe manner at the customers site
- Visual verification of destruction (unlike degaussing), signed off on site by customer
- Crushed hard drives are recycled
- E2E Solution
- Fully Auditable
- Professionally trained, uniformed,
- Service Technicians vetted to BS7858:2006 & CRB checked
- CESG compliant crushing machine technology.

TOTAL DATA DESTRUCTION using CCTM and CESG Claims Tested technology.

If you see it crushed, you have no risk, and you pass your security audit.
If you don't, do you really know the data has been destroyed?
